Hiking  
Snowboarding  
Gaming  
Playing Guitar

## Work Experience

### Co-founder of Ripple

October 2016 - Present

Ripple is a company built to help college students achieve their goals. We have found that many college students have big dreams but lack the structure and guidance to make them a reality because university classes can only teach so much. We aim to solve this problem by creating a platform where students can connect with other students, share their knowledge, and track their progress towards achieving their goals.

### Freelance Web/Logo Design

2015 - Present

My freelance career started during my senior year of high school when I was asked to design an array of shirts for my school store. I learned that excellent communication skills are required in order to be successful and its my focus on all my future projects. Now with the completion of my personal website, I am ready to take on more challenges as I continue to improve my designs.

### Visual Designer at CAB

2016 - Present

I have been working for the College Activities Boards designer graphics for events hosted on our campus. I spend my time collaborating with other designers and project managers to ensure that I am designing the right visuals for their events. Work includes print and digital ads as well as web development work for special events.
